

3. STEP 3 – MAKING UP & EVALUATION

3.1. Making Up

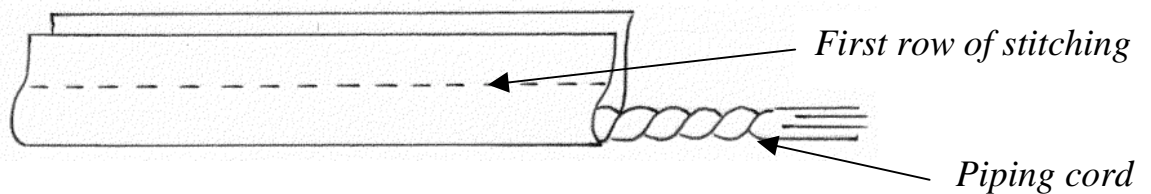

- *Cut out the front cover face fabric. Round off the corners using a 10pence piece or other suitable small round object. This eliminates the possibility of the cover having ‘ears’. **Diagram 1***

Diagram 1

- *Make up the piping casing to the required length referring to **Section 5**. N.B. Remember that this first row of stitching securing the piping inside the casing should be set back slightly to allow room for the final seam lines.*

Diagram 2

- *Attach the piping casing to the front cover using a piping or zipper foot on your sewing machine. Take extra care in the corners easing the piping and snipping into corners as you go. This second row of stitching should run parallel to the first row of stitching on the piping sleeve and slightly nearer the cord - **Diagram 3** below. Joint the piping cord and the bias piping strip referring to **Section 5** as previous.*

Snip into corners
